

PREPARED FOR

Marc Cunningham and Crawford & Company
growth, proposal, and operational stakeholders

DATE

March 20, 2026

 **PREPARED BY BOSS KEY LLC**

EXECUTIVE SUMMARY

Proposal operations modernization for a more reliable growth-to-proposal chain.

Boss Key helps growth and proposal leaders tighten the chain between qualification, capture thinking, pricing support, handoffs, review discipline, content governance, and execution so automation can later be used with greater confidence.

CORE ARGUMENT

Most proposal organizations do not need more boilerplate. They need a stronger operating chain upstream of proposal execution.

WHAT USUALLY FAILS

Strategy arrives late, proposal joins under compression, pricing turns reactive, executive reviews become fire drills, and reusable content is not consistently trustworthy.

WHAT AUTOMATION-READINESS MEANS

Opportunities are qualified earlier, intake is structured, source content is current and owner-backed, and reusable knowledge objects can be retrieved with confidence.

WHY THIS MATTERS

The payoff is not just faster drafting. It is better drafts, less rework, less executive thrash, and more confidence in what the team is reusing.

Boss Key's three linked layers

OPERATING

Qualification criteria, structured intake, role clarity, kickoff discipline, review cadence, and escalation paths.

KNOWLEDGE

Content inventory, repository architecture, taxonomy, source-of-truth mapping, proof-point governance, and stale-content controls.

AUTOMATION

Retrieval-ready modules, governed repository approach, structured prompts and templates, and human-in-the-loop review.

RECOMMENDED START

The cleanest first move for Crawford is a focused proposal-ops diagnostic and automation-readiness pilot within one business line or one pursuit segment.

WHAT THE PILOT SHOULD PROVE

Content trustworthiness, repository structure, intake discipline, automation feasibility, and measurable cycle-time and quality improvement.
